# Monitoring Synology Active Backup with CheckCentral

Synology Active Backup is used by many MSPs for local and offsite machine, M365, and Google Workspace backups. This guide will provide some general steps for configuring the email notifications on the Synology NAS, and configuring checks for the various types of backups. Synology backup emails and email notification settings can vary depending on the version of DSM and the type of job, so this is meant to be a general overview, and not an all-encompassing guide.

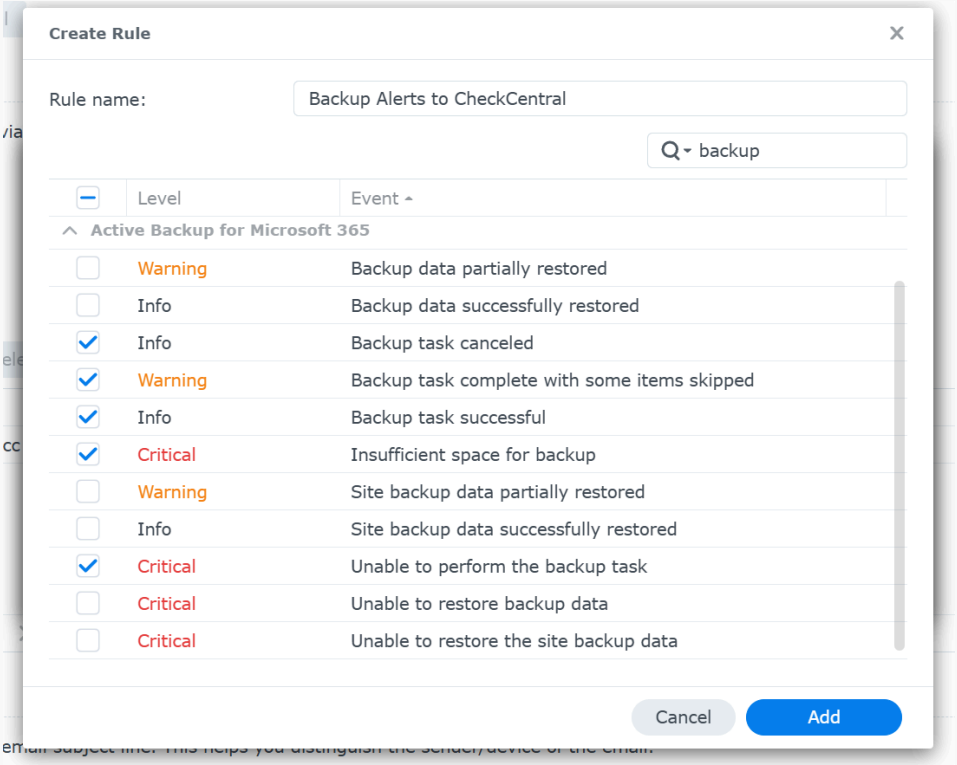

If you're unfamiliar with creating Checks in CheckCentral, please read through our **Check Creation Guide** first. Once you're comfortable with how the checks work, the information below will provide details on using notification rules in the Synology UI, and what criteria you can use in your Checks for matching and determining Success statuses.

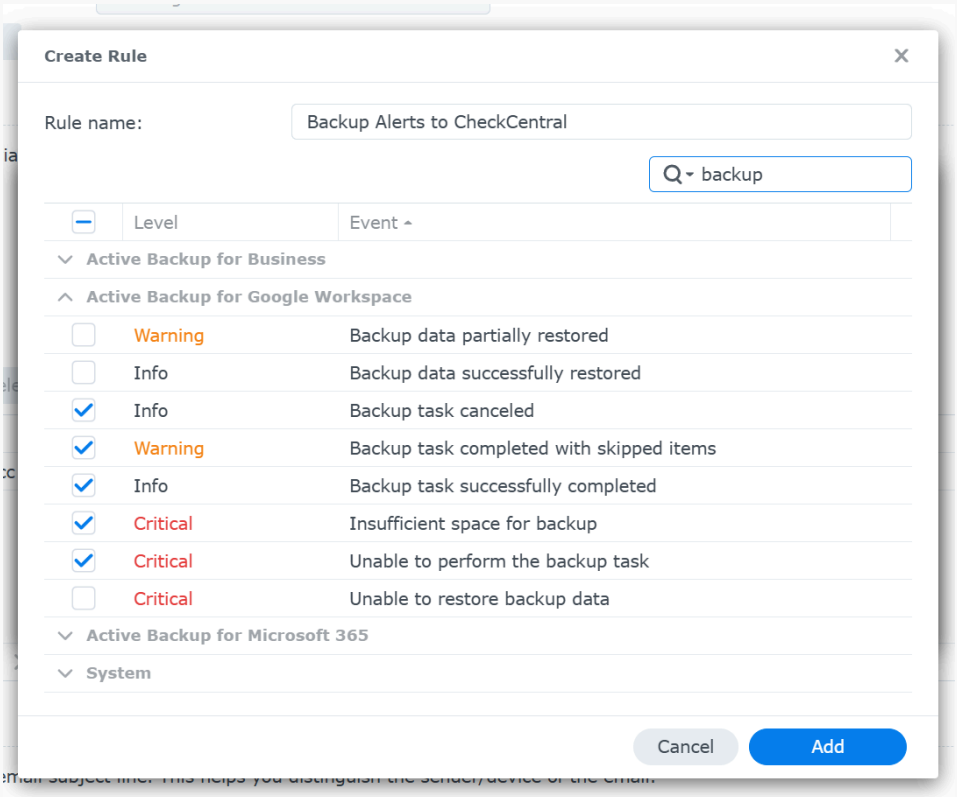

## Configuring Recipient Profiles on the Synology NAS

You'll likely want to create a custom recipient profile on the NAS to send only the backup notifications to CheckCentral. The destination email address in the notification rule should be your base CheckCentral email address. You can access the settings for recipient profiles in Synology DSM > Control Panel > Notification > Email.

Below are some screenshots of the notification types we recommend sending to CheckCentral.

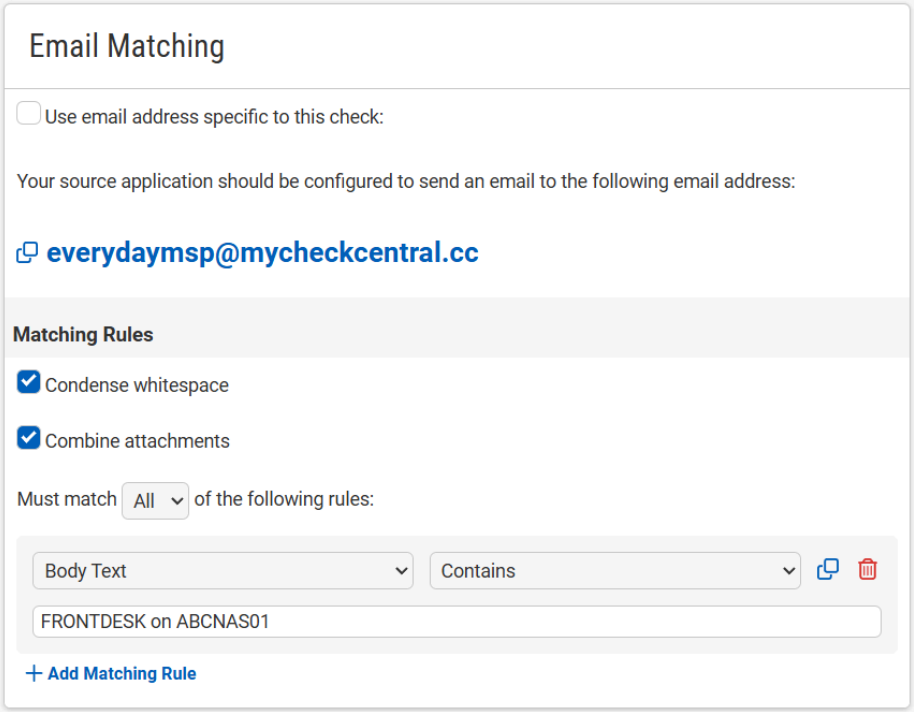

Create Rule
Rule name:
Backup Alerts to CheckCentral
backup
Level
Event
Active Backup for Microsoft 365
Warning Backup data partially restored
Info Backup data successfully restored
Info Backup task canceled
Warning Backup task complete with some items skipped
Info Backup task successful
Critical Insufficient space for backup
Warning Site backup data partially restored
Info Site backup data successfully restored
Critical Unable to perform the backup task
Critical Unable to restore backup data
Critical Unable to restore the site backup data
Cancel
Add

# Check Matching Rules and Status Criteria for a Machine Backup Notification

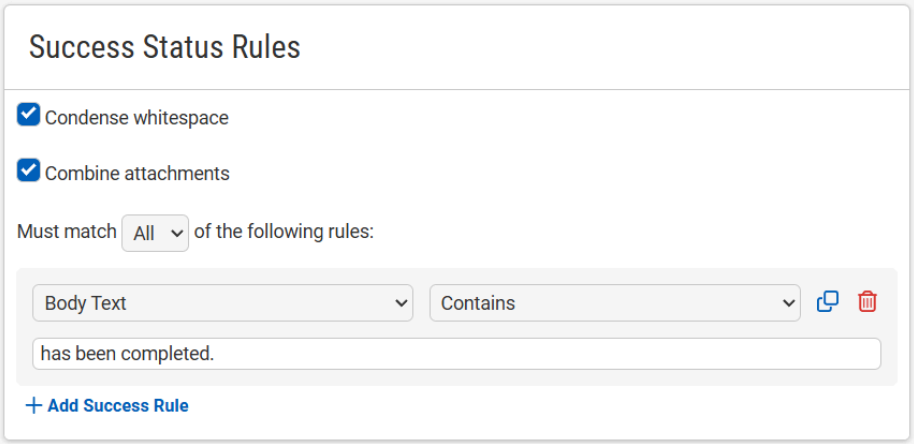

For matching an Active Backup for Business job, you'll want to do the following in the Email Matching section of the Check configuration:

- Disable the "Use email address specific to this check" option.
- Set the matching rule to `Body Text` `Contains` `job-name on nas-name`. For example, if your job name is FRONTDESK and your NAS name is ABCNAS01, then your body text contains match would be `FRONTDESK on ABCNAS01`

For the setting the Check status, you'll want to do the following in the Status section of the Check configuration:

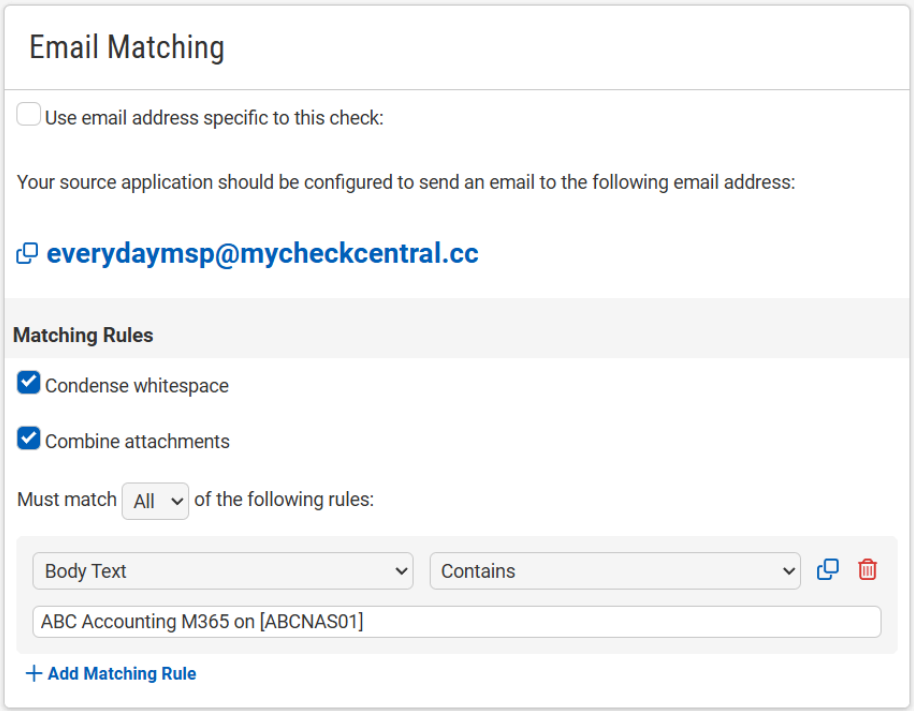

- Set the Default Status to Failure.
- Set the Success Status rule to `Body Text` `Contains` `has been completed.` (make sure to include the period after completed)

## Creating a Check for an M365 Backup Notification

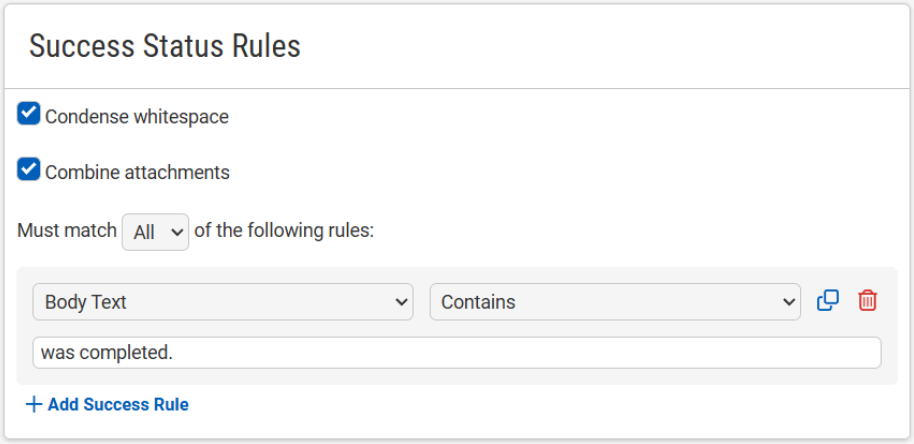

For matching an Active Backup for Microsoft 365 job, you'll want to do the following in the Email Matching section of the Check configuration:

- Disable the "Use email address specific to this check" option.
- Set the matching rule to `Body Text` `Contains` `job-name on [nas-name]`. For example, if your job name is ABC Accounting M365 and your NAS name is ABCNAS01, then your body text contains match would be `ABC Accounting M365 on [ABCNAS01]`

For the setting the Check status, you'll want to do the following in the Status section of the Check configuration:

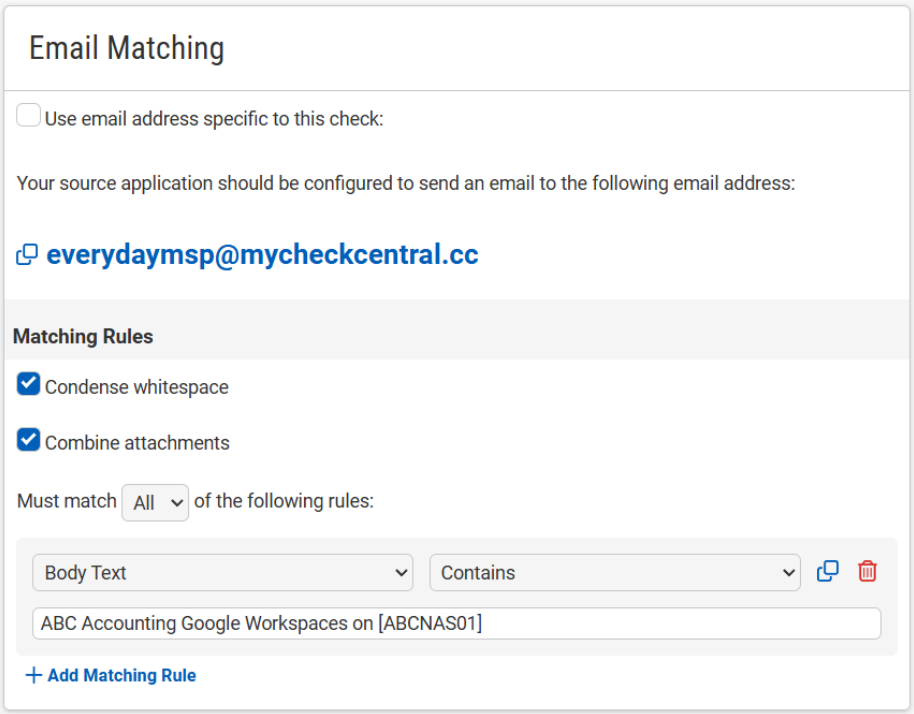

- Set the Default Status to Failure.
- Set the Success Status rule to `Body Text` `Contains` `was completed.` (make sure to include the period after completed)

## Creating a Check for a Google Workspaces Backup Notification

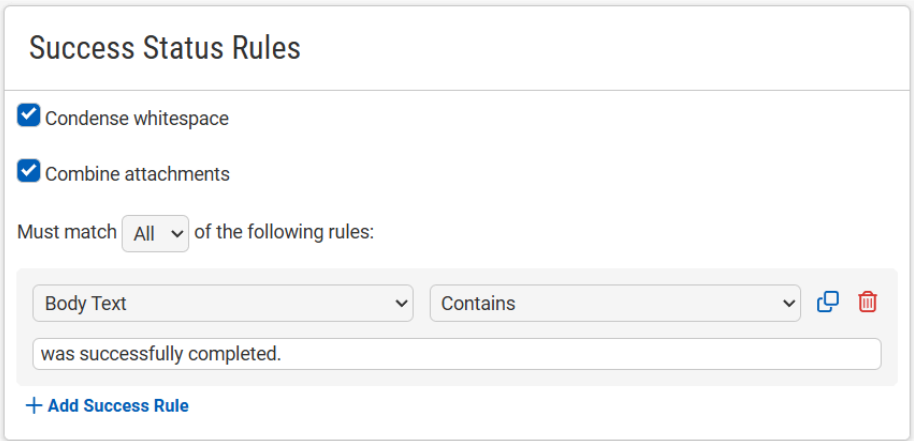

For matching an Active Backup for Google Workspaces job, you'll want to do the following in the Email Matching section of the Check configuration:

- Disable the "Use email address specific to this check" option.
- Set the matching rule to `Body Text` `Contains` `job-name on [nas-name]`. For example, if your job name is ABC Accounting Google Workspaces and your NAS name is ABCNAS01, then your body text contains match would be `ABC Accounting Google Workspaces on [ABCNAS01]`

For the setting the Check status, you'll want to do the following in the Status section of the Check configuration:

- Set the Default Status to Failure.
- Set the Success Status rule to `Body Text` `Contains` `was successfully completed.` (make sure to include the period after completed)
